

**Arbela Technologies Reaches Milestone Towards
Achieving the Certified for Microsoft Dynamics Accreditation**

Laguna Niguel, CA – May 12, 2015 – Arbela Technologies announced today that its Arbela Security Manager (ASM) for Dynamics AX, the only natively developed security solution built and managed within Dynamics AX while providing the user the comfort of never having to leave the AX application; has passed the Software Solution Test for Microsoft Dynamics, which is a major requirement for becoming Certified for Microsoft Dynamics® Status.

As a premier Microsoft Gold Partner, Arbela advances and adds value to Microsoft's leading business solutions and client relationships by ensuring that each and every client receives the highest level of attention and service, expertise, and results, thus maximizing their investment in Microsoft technology. Focusing on their customer's success, Arbela brings best practices and a proven, repeatable methodology to their target industries. With an impeccable track record of over 100 successful ERP implementations, Arbela is often engaged after others have failed.

Arbela Security Manager addresses three fundamental areas of security:

1. Simplification of Security Creation and Management
2. Managing Risk & Compliance Requirements
3. Audit Preparation with Inquiries and Reports
4. Optimize User Licensing

ASM is the only natively built security solution built and managed within Dynamics AX and provides the user the accuracy needed to set security visibly and quickly. ASM simplifies the

complexity of security in Dynamics AX 2009 and 2012 by offering a list of capabilities that can make security management easier while:

- Enabling users to fully leverage the powerful capabilities of AX security.
- Providing an engaged visual interface to facilitate set up, review, and track security settings in Dynamics AX.
- Enabling security management directly within the regular AX User Interface (UI).
- Making security settings immediately visible using color coding and standard AX security level symbols.
- Meeting Auditing and Compliancy Requirements by providing database level tracking of changes and enforcing Segregation of Duty rules proactively.
- Providing a comprehensive set of Reports and Inquiries on roles, duties, privileges and changes for better managing users and roles.

“We have always been committed to software excellence, and passing the Software Solution Test for Microsoft Dynamics is a reflection of that commitment,” said Nima Bakhtiary, President and CEO of Arbela Technologies. “ASM has been supported for Dynamics AX 4.0, 2009, and 2012. As Microsoft releases new versions of Dynamics AX, we have a continued initiative to upgrade our security manager to help all our clients solve their security management, auditing, compliance and reporting issues.”

“By requiring the software solution to meet our highest standards, Microsoft is assuring customers that these certified solutions work with their investments in Microsoft Dynamics,” said Doug Kennedy, vice president, Microsoft Dynamics Partners. “Microsoft congratulates

Arbela Technologies on the software test results and wishes them success in earning the Certified for Microsoft Dynamics designation.”

Certified for Microsoft Dynamics is Microsoft Corp.’s highest standard for partner-developed software. This certification represents a significant step in elevating the standard for partner-developed software solutions for industry-specific business applications. Solutions with a successful software test have demonstrated development quality and compatibility with the Microsoft Dynamics product. VeriTest, a service of Lionbridge, performed independent and rigorous testing on the solution’s integration with Microsoft Dynamics. Arbela Technologies has also earned the Microsoft Certified Partner designation with the ISV Competency.

About Arbela Technologies

Based in Southern California with a global footprint, Arbela Technologies empowers its clients to transform their organization to meet the ever changing market demands. We provide industry specific financial, supply chain, manufacturing, operations, and customer relationship management solutions combined with strategic change management experience for Microsoft Dynamics AX and Dynamics CRM.
