## New QMS Software Release Provides Improved Quality Management in Microsoft Dynamics 365 for Finance and Operations

Chanhassen, MN March 25, 2020 – ERP Solutions, Inc., the world leader in advanced quality management solutions for Dynamics 365 for Finance and Operations, announced today a new version 3.0 of their QMS solution, Total Quality Control Management (TQCM). The new release incorporates additional functionality and continuing improvements to the product's existing rich features. TQCM has been the leading Quality Management Solution for Dynamics since it was first introduced in 2004.

TQCM has been expanded with additional languages and now includes translations for quality control plans. Integration is improved to standard D365 Human Resources for personnel certificates qualification and tracking. Quality Requirements Planning (QRP<sup>TM</sup>) has been improved with Single Run Frequencies that permit QRP to quickly apply quality scheduling against single processes for purchasing, production and sales. Other areas include improvements to quality processes including CAPA, NCR, and Customer Complaints.

A new major feature in this version called Quality Questionnaire. Quality Questionnaire provides users with the ability to create typical questions with standard responses to aid in quality processes. Quality Questionnaire includes integration to Customer Complaints and Inspections. Predefined questions added to a Complaint can assist the person responding or investigating complaints by enabling them to follow a defined path to resolve customer issues. A new Module called Inspection Orders provides a centralized inspection area for incoming materials directed through the D365 Warehouse Management System.
